Statistics Canada Statistique Canada

### Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

**CANSIM Division**

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montreal | (283-5725) | Regina | (359-5405) |
| Ottawa | (992-4734) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory,* Catalogue 12-569 — $16.70 Canada, $20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — $7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, Business, Provincial and Municipal Relations Division
B.J. Lynch — Director General, Business Statistics
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methods Development Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
— Director General, System of National Accounts and Analysis Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

# Financial Activity in Canada

## Fourth Quarter 1983

Demand for funds during the fourth quarter was moderate. Non-financial sectors borrowed $22 billion in conventional credit markets, which represented about 22% of Gross National Expenditure, about the same percentage as in 1982. By comparison, borrowing by these sectors represented about 30% of GNE in the same period of 1980 or 1981. The predominant borrower was the federal government, with net new issues of $11.6 billion in Treasury bills and bonds, including an $8.5 billion net issue of Canada Savings bonds. Private non financial corporations continued to take advantage of high stock prices, raising $2.0 billion in net new share issues although their total demand for funds on these markets remained unusually low. The personal sector increased consumer credit and mortgages outstanding but less so than in the previous two quarters.

The increase in Gross National Product of 0.9% in real terms, seasonally adjusted, during the fourth quarter was less than the average 1.9% rate of increase in the first three quarters of the year. Merchandise export increases, a major source of growth, reflected demand in the United States. In Canada, final domestic demand was weak with declining residential construction and business capital formation and decelerating increases in personal expenditure. In the United States, the rate of expansion of the economy and concern over conflicting borrowing requirements of expanding industry and government deficit financing resulted in upward pressure on interest rates; yields on 30 day commercial paper increased by 60 basis points during December, leaving equivalent yields in Canada some 30 basis points behind. In spite of a continuing trade surplus, the interest rate differential resulted in downward pressure on the value of the Canadian dollar, which fell to $U.S. 79.90 in mid-December. This downward pressure was countered by a reduction in foreign exchange reserves of $470 million, allowing increases in short-term interest rates to be minimized. The dollar ended the quarter at $US 80.36, down $US 0.80 from the end of September. Over the quarter, short-term rates increased by 35 to 55 basis points. Mortgage rates continued their decline; 5 year rates fell by about 1.5 percentage points to end the quarter at 12.5%. Bond yields, on average increased by about 0.25 percentage points.

With the exception of expenditure on automobiles, increases in personal expenditure on goods slowed from the previous quarter; this is reflected in the consumer credit flow of $1.1 billion, down from $1.4 billion in the third quarter. Declines in residential construction since mid-year and a reduced rate of increase in real estate commissions in the fourth quarter corroborate the personal sector's mortgage liability flow. The increase in mortgages of $2.4 billion was down substantially from increases of $3.2 billion in the third quarter and $4 billion in the second quarter.

Gross fixed capital formation by non-financial private corporations declined for a second consecutive quarter. With continuing high real interest rates as well as uncertainty over the future pace of the recovery, inventory accumulation remained moderate. Profits continued to increase during the quarter, although at a slower rate. As a result of these factors, the non-financial corporate sector in aggregate was a net lender of funds. Internally generated funds along with some of the $2.6 billion raised through share issues were used to increase liquidity and to reduce bank loans (by $157 million) and short-term paper outstanding (by $1.3 billion). Reductions in bank loans had averaged $2 billion per quarter over the previous four quarters; the moderation in the fourth quarter to some extent reflected the diminishing interest cost differential which had favoured short-term commercial paper and bankers' acceptances over bank loans. The sector's net new bond issues of only $354 million can be attributed to increased nominal and real yields as well as the low level of fixed capital investment.

The federal government's net sales of $8.5 billion of Canada Savings Bonds in November allowed a sharp reduction in net new issues of Treasury bills; $1.2 billion compared to $4.5 billion in the previous quarter. A further $2.0 billion was raised through net issues of other bonds, about the same amount as in the previous two quarters. About 25% of gross new issues had terms to maturity of more than 20 years, this proportion was again similar to that of the previous two quarters. The popularity of longer term bonds with investors may have been partly due to the greater potential for price changes (capital gains) in response to yield changes.

## Review of 1983

Demand for net new funds by non-financial sectors on conventional credit markets in 1983 increased to $55.1 billion, representing 14% of Gross National Expenditure, from $43.2 billion or 12% of GNE in 1982. In comparison, these sectors had borrowed the equivalent of 21% of GNE in 1979 and 1980 and more than 25% in 1981. Borrowing by all levels of government of $34.2 billion accounted for about 62% of these funds in 1983. The personal sector's borrowing of $12.5 billion represented about 23% of these funds and was a reversal of the net repayment of $4.0 billion in 1982. For both the non-financial private corporate sector and non-financial government enterprises, borrowing on these markets in 1983 amounted to less than half that of 1982.

Financial markets were characterized by relatively stable nominal interest rates throughout the year. Starting the year at 12.5%, the chartered banks' prime lending rate fell to 11% by April and remained at this rate for the rest of the year. Rates on mortgage loans declined fairly steadily by about two percentage points over the year, ending at about 12.5% for 5 year mortgage loans. The difference between rates on mortgage borrowing for 5 year and 1 year terms widened to over three percentage points in September and reflected the relative availability of funds. Deposits for terms of over 5 years at trust and mortgage loan companies were reduced while those for shorter terms increased. Short-term money market interest rates and bond yields were more volatile. Anticipated conflict between private sector credit demand and government deficit financing requirements as the recovery continued, as well as concern over the rate of expansion of the money supply (as measured by M1, cash and demand deposits), especially in the United States, increased uncertainty over future interest rates and inflation. A continuing improvement in the rate of inflation (down to a 4.5% annual increase in the Consumer Price Index at year-end) and a continuing, although reduced, surplus on current account transactions with the rest of the world, helped to maintain the exchange value of the Canadian dollar until December. As a result, it was possible to maintain short-term interest rates in Canada slightly below equivalent rates in the U.S. during much of the latter half of 1983. The differential on bond yields between Canada and the United States narrowed and was negative at times. The Canadian dollar remained relatively stable against the U.S. dollar (around $US 0.80 until almost the end of 1983) and appreciated with it against most overseas currencies (except the Japanese yen).

The Canadian economy continued its recovery during 1983 with GNP increasing by 3.0% in real terms. By the end of 1983, the level of real output was near the pre-recession peak reached in the second quarter of 1981. Major contributors to the recovery in 1983 were the reduced rate of inventory decumulation, increases in personal expenditure and merchandise exports and increased residential construction in the first half of the year. Business fixed capital formation, however, remained very weak.

The recovery in residential construction activity which had begun in late 1982, stimulated by a steep decline in mortgage interest rates and government incentives, was reflected in personal sector mortgage borrowing which increased from $3 billion in 1982 to $12 billion in 1983. Increased personal expenditure, mainly on durables, was also related to reduced interest rates. Consumer credit liabilities rose starting from the second quarter of 1983, ending a one and a half year period during which consumer credit outstanding had fallen. The declining rate of increase in consumer credit in late 1983 matched a declining rate of increase in personal consumption. In addition, the personal savings rate fell to 12.9% of personal disposable income, from a record high 15% in 1982, but still remained high in comparison to pre-recession years.

Non-financial private corporations reduced inventories by $922 million in 1983, with moderate accumulation in the second half of the year partly offsetting an earlier reduction. By comparison, inventories had been reduced by over $10 billion in 1982. The slow accumulation, in spite of a low ratio of inventory to shipments, seems to have been due in part to continuing concern over interest costs; while nominal interest rates were relatively stable, a continuing decline in the rate of inflation meant that real interest rates increased. Gross fixed capital formation was very weak, falling by $1.7 billion to $35.4 billion. Capacity utilization rates in manufacturing increased but remained below pre-recession levels. There was continued concern over improving corporate balance sheets, i.e., reducing debt to equity ratios and increasing liquidity. Reduced interest costs and increased sales together contributed to a marked improvement in profits. The sector took advantage of continuing increases in share prices (the TSE Composite Index of 300 Stocks rose by about 30% during the year) to raise $6 billion in net new share issues. About two thirds of these issues were common shares, whereas in 1982, common shares had represented only one third. Some of the funds raised through share issues or from operations were applied against short-term debt outstanding. Bank loans were reduced by $8.4 billion. While short-term paper outstanding increased by $1.5 billion, a large part of the increase was in the form of bankers' acceptances; to some extent substitutable for bank loans, they offered an interest rate advantage of close to two percentage points for much of the year. When the interest rate advantage narrowed in the fourth quarter, issuance of bankers' acceptances was sharply reduced.

General government financing requirements for the year totalled $26.2 billion, compared with $23.2 billion in 1982 (6.7% and 6.5% of gross national expenditure respectively). The Financial Market Summary also reveals that governments remained the major borrowers on the domestic market, accounting for 62% of total funds raised by non-financial domestic sectors, down slightly from 69% in 1982.

The federal government's deficit in National Accounts terms reached $24.5 billion in 1983, compared with $20.5 billion in 1982. Treasury bills were used to finance over half of the 1983 shortfall ($13.3 billion); net issues of marketable bonds raised $6.9 billion and Canada Savings Bonds $5.9 billion. Banks and near-banks funded proportionately more of this borrowing by the federal government than usual, purchasing 31% of Treasury bills and marketable bond issues in 1983, compared with 19% in 1982 (weak demand for loans prompted these institutions to invest more in Treasury bills). The federal government was more inclined to issue Treasury bills since the average yield differential between them and marketable bonds rose from 71 points in 1982 to more than 120 points in 1983. The reduction in net savings bond issues from 1982 reaffirms the shift in the federal government's sources of funds from the personal sector to the banking sector. In 1982, households financed 50% of the federal deficit, compared with only 41% in 1983. A net $109 million in Government of Canada bonds were issued abroad, down from $1,789 million during 1982 when large borrowings were made to augment foreign exchange reserves. The proportion of marketable bonds issued in 1983 with terms to maturity of 10 years or longer was 62%, double that of 1982. The percentage of funds raised by Treasury bills was much higher in 1983 than in previous years, while marketable bonds and, to a lesser extent, savings bonds became less important.

The provincial governments' deficit in 1983, was almost unchanged from 1982. Similarly, there is little difference in net bond issues in the two years ($9,202 million in 1983 and $9,273 million in 1982). Short-term paper, which in this case includes provincial Treasury bills, was heavily used in 1983, as it was in 1982. The decrease in net issues of provincial government and enterprise bonds to the rest of the world from $5.6 billion in 1982 to $4 billion in 1983 is associated with the movement of interest rates in the United States, which for the most part remained quite high in relation to Canadian rates.

In National Accounts terms, local governments recorded a $514 million surplus in 1983, compared with a $413 million deficit in 1982. As in 1982, they continued to repay bank loans and this decrease in indebtedness was not offset by net bond issues.

# Observations

## LANGUAGE IN CANADA

Canada is an officially bilingual country but many languages, other than English or French are also present. Native languages were used across the continent centuries before the first European settlers brought French and English to the eastern seaboard. Later, immigrants from all over Europe settled in city neighbourhoods and in rural areas, bringing with them a wide variety of different languages. More recent immigrants from India, China and Vietnam have added their mother tongues to the mosaic. In 1981, besides publications in English and French, over 150 Canadian newspapers and magazines were published in close to 40 languages.

English is the mother tongue of six out of ten Canadians. It is not only the most common language but it is also largely adopted, even in Quebec, by people who first learned a non-official language in their childhood. In 1981 however, 11% of the Quebec population reported English as their mother tongue less than in 1971. On the other hand, one quarter of the Canadian population have French as their mother tongue. About a third of those with French mother tongue living outside Quebec use English as their main home language.

Retention of languages varies among different non-official mother tongue groups. Persons whose mother tongue is Chinese, Portuguese, Italian or a native language, are more likely to retain their mother tongue than those whose mother tongue is German or Ukrainian.

During the last decade, bilingualism in Canada has been increasing at more than twice the rate of population growth. And there are signs of change in the Anglophone/Francophone composition of the bilingual population.

*LANGUAGE IN CANADA* shows where the various linguistic groups are located. It examines the maintenance of mother tongue by the English in Quebec, the French in and outside of Quebec, and by various other mother tongue groups. It also looks at changes in official bilingualism.

*LANGUAGE IN CANADA* is a highly readable publication from the Census Content Series. Seven tables and nine coloured charts are used to complement the text.

This publication will be of interest to the federal, provincial, and municipal governments, school boards, educators, publishers, librarians and all branches of the media.

You can purchase your copy of *LANGUAGE IN CANADA* (Catalogue No. 99-935-$5.50 in Canada, $6.60 elsewhere) by sending a cheque money order payable to the Receiver General of Canada, to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

## "HIGHLIGHTS: 1981 CENSUS OF CANADA"

"**Highlights: 1981 Census of Canada**" is a compendium of six overview articles which first appeared between June and December, 1983 in the *Canadian Statistical Review.* Written by demographers and economists expert in the analysis of Census data, "Highlights" is a compact, yet comprehensive 52 page publication which elaborates on selected data from the 1981 Census.

**Part 1**: "Demographic Highlights" analyses population change, age, fertility, living arrangements, and migration between 1971 and 1981. This brief overview points to both significant changes and signs of stability in the basic population measures of Canadians.

**Part 2**: "Socio-Cultural Highlights" reviews important measures of social change derived from data on ethnicity, place of birth, immigration, language, and religion. The data show that Canada is becoming more heterogeneous, both in terms of ethnic background and the source regions of immigration.

**Part 3**: "Changes in Canada's Labour Force During the 1970s" provides information on labour force growth and participation, and characteristics such as education, industrial structure, occupational composition, work experience and earnings. The highlights discussed in this article point to a dynamic labour force that underwent major changes during the 1970s.

**Part 4**: "Housing Highlights" provides an overview of living conditions and shelter expenditures for both persons and families living alone. This report presents Census housing data in the light of the diverse range of family types, including not only lone-parent families, but also empty-nest, childless, and husband and wife families with children.

**Part 5**: "Education Highlights" examines selected data on educational attainment and school attendance by such socio-economic characteristics as age, occupation, migration, income, and labour force activity. In general, the higher the level of schooling, the higher the level of employment and income. The data clearly indicate that the educational attainment of Canadians had reached historically high levels in 1981.

**Part 6**: "Changes in Work and Education Patterns and Family Income, 1970-1980" estimates the impact of changes which took place during the seventies in work and education patterns of husbands and wives on their family incomes. The proportion of working wives increased from 44% in 1970 to 61% in 1980, and overall, wives contributed 22% of family income in 1980 compared to 15% in 1970. Over the decade, the proportion of husbands and wives with at least a high school certificate increased from 37% to 58%. Depending on the family's work and education, average income of these families in 1980 ranged between $20,000 and $53,000.

"Highlights" points out major trends and bench mark statistics. The significance and application of selected tables and charts are explained and further methods of census data utilization and analysis are suggested.

You can purchase your copy of "**Highlights: 1981 Census of Canada**" (Publication No. 92-X-533E) by sending a cheque or money order, payable to the Receiver General for Canada, for $6.00 a copy, to Publication Sales and Services, Canada, Ottawa, K1A 0T6.

## UNDERSTANDING SURVEY SAMPLING

A concise and easy-to-understand guide to survey sampling is now available from Statistics Canada.

*Survey Sampling: A Non-mathematical Guide* is ideal for those with little or no formal training in mathematical statistics. First time or occasional survey researchers, social science students, and especially users of market research surveys will obtain a good basic understanding of sampling methods and design from this publication. Experienced researchers, who find themselves removed from the grass-roots of conducting surveys, will also find this manual a valuable reference source to the basics of survey research. Unlike other documents, this 69 page guide explains the concepts and methods of survey sampling in a non-mathematical format. A survey, one modelled on Statistics Canada's own Farm Expenditure Survey, is used throughout the text to illustrate the various sampling methods.

*Survey Sampling* guides the reader easily through key topics such as the basic elements of sample design; probability and non-probability sampling methods; sampling and non-sampling errors; determining the sample size; handling non-response; and weighting data.

To order your English or French version of *Survey Sampling: A Non-mathematical Guide* write to: Sales Unit, Central Inquiries, Statistics Canada, Ottawa, Ontario, K1A 0T6.

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

## Table 1: Population,[1] by province (thousands)

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

# Section 3 · System of National Accounts

**1. Income and Expenditure Accounts**

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

**2. Domestic Product by Industry**

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

**3. Balance of International Payments**

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1—Income and expenditure accounts

### Table 1.1: National income and gross national product (millions of dollars)

| Year and quarter | Wages, salaries, and supplementary labour income | Military pay and allowances | Corporation profits before taxes[1] | Deduct dividends paid to non-residents[2] | Interest & misc. investment income[3] | Accr'd net income of farm operators from farm prod.[4] | Net income of non-farm un-incorp. business incl. rent[5] | Inventory valuation adjust.[6] | Net national income at factor cost | Indirect taxes less subsidies | Capital consump. allowances & misc. val. adj. | Residual error of estimate | GNP at market prices | GNP at market prices excl. accrued net income of farm operators |

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). . [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

**For source see Table 1.9.**

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

## Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

| Annual average and month | Total shipments | Non-durable | Durable | Foods and beverages | Tobacco products | Rubber | Leather | Textile | Knitting mills | Clothing | Wood |
|---|---|---|---|---|---|---|---|---|---|---|---|
| D | 310000 | 310021 | 310022 | 310001 | 310002 | 310003 | 310004 | 310005 | 310006 | 310007 | 310008 |

---

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc

[2] Includes crude oil, condensate and pentanes plus.

[3] Gross new production by field less field flared and waste.

---

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

---

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

---

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Statistics Canada    Statistique Canada

**Data in Many Forms . .**

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

**How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

**CANSIM Division**

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montreal | (283-5725) | Regina | (359-5405) |
| Ottawa | (992-4734) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory,* Catalogue 12-569 — $16.70 Canada, $20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — $7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, Business, Provincial and Municipal Relations Division
B.J. Lynch — Director General, Business Statistics
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methods Development Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
— Director General, System of National Accounts and Analysis Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 6 — Table 7: Tobacco and beverages

As of this issue the series "Production and Domestic sales of fine cut tobacco and other tobacco" D2089, D2090, D2093, D2094 are now in kilograms.

Monthly or quarterly data may not add to totals due to rounding.

Section 10 — Table 1/concluded: Value of retail trade by type of business

The series Total all stores S.A. D650087 (using the direct seasonal adjustment method) has been terminated from this issue and replaced by Total all stores S.A. D656023 (using the indirect seasonal adjustment method).

## A Note on the Measurement of Poverty in Canada

### Introduction

Social policy for at least the last 25 years has had a strong emphasis on poverty related issues — whether it be promotion of the elimination of poverty as an explicit government goal or the evaluation of government programs in terms of their impact on the less advantaged in Canadian society. Parallel to this policy emphasis, and also in response to it, statistics on the low income population (mainly coming from the annual Survey of Consumer Finances and the Census) were developed for analytic and monitoring purposes.

This note examines data that are currently used to focus on the basic poverty questions — how much income is a socially acceptable minimum and how many persons are poor. Since a number of alternative low income/poverty measures are currently in use in Canada, it was felt to be a useful exercise to bring together in one note a brief summary of the alternative low income/poverty lines and to compare statistical results based on these alternative measures. To this end, brief descriptions of the alternative low income/poverty lines that are in common use (or modifications of them) are presented, followed by an analysis of the incidence of low income and the characteristics of the low income population. Tabular material presenting the statistical estimates based on the alternative cut-offs is summarized at the end of the note.

Some of the significant findings based on the comparative analysis in the report are:

- The 1981 dollar values of the cut-offs vary substantially, for example, from about $11,000 to about $20,000 for a family of size four. Because of this variation, the estimated proportion of the population below the low income/poverty lines varied from 10% to 22% of the population in 1981,

- In spite of differences in the dollar cut-offs and the resulting difference in rates of low income incidence the same socio-economic groups show up as being disproportionately represented among the low income population. Regardless of the low income/poverty lines used, families with unemployed members, single parent families, and elderly unattached females are always overrepresented among the low income population,

- On the other hand, because the Statistics Canada cut-offs are differentiated by size of area of residence (they are lower in small urbanization size categories) and the other concepts do not make this distinction, estimates based on the Statistics Canada based cut-offs show little variation in the low income incidence by urbanization size compared to substantial variation based on the other sets of cut-offs. Directly related to this, and due to provincial differences in the degree of urbanization, Statistics Canada cut-offs indicate less provincial variation in the proportion of persons below the cut-offs.

### Description of Alternative Low Income/Poverty Lines

Low income/poverty lines are the income levels that are used to identify the low income/poverty population. These incomes tend to be interpreted as income levels below which nobody should fall although the method of derivation may not necessarily support such an interpretation. In fact, Statistics Canada in its published material on low income avoids the use of the term "poverty line" in favour of the more appropriate technical phrase "low income cut-off" because Statistics Canada does not claim complete objectivity or comprehensiveness for its cut-offs. Clearly, not all persons or individuals with incomes below the cut-offs are "poor" in any meaningful sense, while others with incomes above the cut-offs are living in much more straitened circumstances.

Eight different low income/poverty lines have been chosen for review in this note and are explained briefly below. More detailed explanations are available in the references at the end of this note. Two of the sets of low income/poverty lines (Statistics Canada low income cut-offs, 1978 base and 1969 base) are currently used by Statistics Canada each year to generate estimates of the characteristics of the low income population. Two other sets of low income/poverty lines (Modified 1 and Modified 2 Statistics Canada 1978 base) are variations on the Statistics Canada low income cut-offs and are not generally published. The final four low income/poverty lines (First Quintile, Senate, CCSD and U.S. Adjusted) have been selected because they are well-known or correspond to frequently proposed measures of low income/poverty.

1. Statistics Canada Low Income Cut-offs — 1978 base

These low income cut-offs, differentiated by family size and size of area of residence, were the income levels, determined from an analysis of 1978 family expenditure data, where on average 58.5% or more of income is spent on food, shelter and clothing. The choice of the 58.5% criterion was based on adding 20 percentage points to the national average proportion of income spent on food, shelter and clothing for all families. The low income cut-offs have historically maintained an arbitrary 20 percentage point difference in the ratio of expenditure to income between what low income and all families spend on food, shelter and clothing.[1] Since the 1978 Family Expenditure Survey indicated that all families spent 38.5% of their income on food, shelter and clothing, the corresponding percentage for a low income family was 58.5% or more.

2. Statistics Canada Low Income Cut-offs — 1969 base

These low income cut-offs were set at income levels (differentiated by family size and degree of urbanization) where, on average, at least 62% of income was spent on food, shelter and clothing. These low income lines were derived from data from the 1969 Family Expenditure Survey which indicated that, on average, families spent about 42% of their income on food, shelter and clothing.

3,4 Modifications to Statistics Canada Low Income Cut-offs 1978 base

The practice of allowing for a 20 percentage point difference between what families on average spend and what low income families spend on food, shelter and clothing is recognized to be arbitrary. To test the sensitivity of the Statistics Canada 1978 base low income cut-offs, the differential was alternatively set at 17 per cent and 23 per cent, a 3 percentage point range around the current 20 per cent difference. These cut-offs (Modified 1 — Statistics Canada 1978 base and Modified 2 — Statistics Canada 1978 base, respectively) are at income levels where on average at least 55.5% and 61.5% of income is spent on food, shelter and clothing. Similar to alternatives 1 and 2, these cut-offs are differentiated by family size and degree of urbanization.

5. The Senate Comittee Poverty Lines (Senate)

The Special Senate Committee on Poverty chaired by Senator David A. Croll developed poverty lines based on income levels which reflected "items of basic need".[2] These lines are differentiated by family size and adjusted each year by an escalator based on living standards, as reflected by the amount of disposable personal income available in Canada in any given year. The annual escalator is designed to adjust for real as well as nominal changes in income, and for change in average family size over time. The resulting poverty levels are close to half of the average income for families of sizes 2, 3 and 4 in 1981. Senator Croll releases periodically an update of the Senate Committee poverty lines and those released for 1981 were used in this note.

6. Canadian Council on Social Development Poverty Lines (CCSD)

The Canadian Council on Social Development, after a recent revision, set its poverty line for a family of three at 50% of the average income of all Canadian families. Adjustments were then made for different family sizes on the basis of "family income units". Annual adjustments to the lines are related directly to changes in average income of all Canadians.

7. **American Poverty Line Adjusted for Rate of Exchange**[3] (U.S. Adjusted)
The United States poverty line is based on the economy food plan, the least costly of four nutritionally adequate food plans designed by the United States Department of Agriculture. Based on a 1955 U.S. Department of Agriculture survey of food consumption it was determined that families of three or more persons spent approximately one-third of their income on food. The poverty level for these families was set at three times the cost of the food plan with slightly higher factors set for smaller households. The poverty line is updated using the Consumer Price Index and is differentiated by family size and number of family members under 18 years of age as well as by age (elderly/non-elderly) for one and two person family units. The line is referred to as U.S. Adjusted because an exchange rate of $1.25 Canadian was utilized to obtain a line expressed in Canadian dollars.

8. **First Quintile Cut-offs**
This methodology places 20% of family units below the cut-offs or corresponds to one popularly expressed notion that the lowest 20% of families are poor regardless of the prevailing income distribution. The First Quintile Cut-offs are the income limits below which 20% of the families are found. In this note the income levels have been determined separately for each family size (unattached individuals and family size 2 through 7 or more) by ranking the particular family size group in ascending order of family income and choosing the income level below which 20% of families are found.

Based on the eight alternative low income/poverty measures, Table 1 compares representative low income/poverty lines by family size for 1981. Since the Statistics Canada and American cut-offs are differentiated by more characteristics than family size it has been necessary to average these cut-offs over the other characteristics to obtain average cut-offs by family size for comparison purposes.[4] It is clear from Table 1 that the alternative low income/poverty lines vary substantially. For a family of four, the cut-offs vary from $11,609 (U.S. Adjusted) and $13,093 (Statistics Canada 1969 base) to $17,757 (CCSD) and $20,160 (First Quintile), a broad range. This variation suggests a lack of concensus with respect to the appropriate level of a poverty line.

Apart from the wide difference in income levels, the lines also indicate a lack of concensus in respect to the necessary income difference (or equivalence scale) between couples and persons living alone. It is generally accepted that a two person family requires less than twice as much income as an unattached individual. A group of low income cut-offs, which consists of Statistics Canada 1978 and 1969 base, Modified 1 and 2 Statistics Canada 1978 base and U.S. Adjusted, shows that the minimum income level for a two person family is 30% to 40% higher than that for an unattached individual. A second group, comprised of the CCSD and Senate Committee poverty lines, indicates that the required incremental rate from an unattached individual to a two person family is 70%. According to the First Quintile cut-offs, the rate is 110%, an indication that quintile limits are not really appropriate for use as poverty lines. Another weakness of the First Quintile as a measure of low income/poverty is the fact that the income level for families of size 7 or more is less than for families of size 6.

## Analysis

Incidence of low income/poverty refers to the proportion (which may be expressed in % as a rate) of individuals or family units in the population of interest whose incomes are below the different low income/poverty lines (see Tables 2 and 3). Text Table 1 summarizes the extreme values of low income incidence for the main universes. The incidence of low income for all persons varies from nearly 10.0% (U.S. Adjusted) to 22.0% (CCSD) — or a variation from 2.4 to 5.2 million persons. For all economic families in Canada, incidence of low income ranges from 8.0% (U.S. Adjusted) to 20.6% (CCSD). For all unattached individuals in Canada, incidence of low income extends from 20.0% (First Quintile) to 41.6% (Modified 1 Statistics Canada 1978 base).

Text Table 1
*Extreme Incidence Values*

| *Universe* | *Highest Incidence (%)* | *Lowest Incidence (%)* |
|---|---|---|
| Economic Families | 20.6 (CCSD) | 8.0 (U.S. Adjusted) |
| Unattached Individuals | 41.6 (Modified 1 SC) | 20.0 (First Quintile) |
| All Persons | 22.0 (CCSD) | 10.0 (U.S. Adjusted) |

---

[3] For a more detailed explanation of the American poverty lines see U.S. Bureau of the Census, *Current Population Reports*, Series P-60, No. 138, Characteristics of the Population Below the Poverty Level: 1981 U.S. Government Printing Office, Washington D.C., 1983.

[4] For the Statistics Canada based cut-offs the values corresponding to the 30,000 — 99,999 urban size category and for the American based cut-offs their published average cut-offs have been chosen.

Of the most commonly referred to low income/poverty lines — the Statistics Canada 1978 base, CCSD and Senate Committee — the incidence data are very similar for unattached individuals (and not much below the extreme incidence value for the unattached) but differ substantially for families, and consequently for all persons as well.

Table 2 shows the various estimates of the incidence of low income by province for all persons. The observed variation in the incidence of low income for Canada is readily seen to be reflected in each province. The CCSD low income/poverty measure consistently gives the highest incidence of low income and, in all cases but one, the U.S. Adjusted concept gives the lowest incidence of low income.

The provincial rankings of the incidences of low income show general agreement although they are not exactly the same. Alberta and Ontario are consistently the provinces with the lowest incidence and the Atlantic provinces tend to have the highest incidence.

One significant observation regarding the provincial data relates to the fact that the provincial variation on the Statistics Canada based low income cut-offs is not as large as for the others. The ratio of the minimum to maximum incidence of low income is 1.8 to 1.9 for the Statistics Canada based cut-offs whereas it is 2.3 to 2.5 for the other low income/poverty concepts. This is due to the fact that the Statistics Canada low income cut-offs vary by degree of urbanization while the others do not. Consequently, to the extent that lower income provinces are less urbanized, the Statistics Canada based low income cut-offs will show less variation in provincial incidences of low income.

Another consequence of the urbanization adjustment can be seen in the different patterns of incidence by urbanization category in Table 3 — the low income incidence is usually lowest in rural areas according to Statistics Canada lines but highest using other concepts.

Table 3 also shows the incidence of low income for a number of other characteristics. Regardless of low income/poverty concept chosen the incidence of low income is high for —

(i) families with unemployed members,
(ii) single parent families,
(iii) elderly unattached females.

Complementing the data on the incidence of low-income, the second part of Table 2 and Table 4 indicate characteristics of the low income population in comparison to the overall population (persons in Table 2, families and unattached individuals in Table 4). The first column provides the distribution (in percentages) by characteristic for economic families and unattached individuals. The remaining columns provide the distribution of low income units according to the alternative low income cut-offs/poverty lines.

## Concluding Remarks

This note provides a comparison of some of the widely referred to sets of low income cut-offs/poverty lines and examines the similarities and differences in terms of estimates of the low income population according to selected characteristics. The following observations are most evident:

- The differences in the dollar amounts across low income/poverty lines as illustrated in Table 1 are substantial. The choice of an appropriate set of low income cut-off/poverty line as support levels could have far reaching implications with respect to policy decisions in this area,
- The incidence figures vary widely in percentage terms and absolute numbers from one low income/poverty line to the next. However, with the exception of differences by urbanization the relative ranking by socio-demographic characteristics is generally very similar on the different concepts,
- The characteristics of the low income families and unattached individuals are broadly similar according to province, age, sex, family characteristics and unemployment experience. The notable exception is the difference in composition according to degree of urbanization,
- The analysis and interpretation of results must consider the parameters used in the derivation of the lines — as, for example, in the case of difference in provincial incidences resulting from whether or not urbanization is a variable on which the cut-offs are based.

# Observations

## Value of retail trade, all stores

In order to improve the quality, reliability and stability of the seasonally adjusted estimates, the procedures employed for the retail trade series have been changed to the end-point seasonal adjustment method, employing ARIMA models provided by the X-11 program. As well, commencing with the publication of the March 1984 preliminary estimates (including the revised estimates for 1983), Canada total estimates have been seasonally adjusted indirectly as opposed to the direct seasonal adjustment method used in the past. (In the case of the indirect adjustment method, the estimates of the 28 trade groups, each individually adjusted, are summed to provide a Canada seasonally adjusted total, whereas in the case of the direct seasonal adjustment method, the unadjusted Canada total is seasonally adjusted itself.) For further information, refer to: Lothian, J. and Morry, M. (1977): The Problem of Aggregation; Direct or Indirect, Ottawa: Seasonal Adjustment and Time Series Analysis Division, Statistics Canada.

For further information, order the March 1984 issue of Retail Trade (63-005, $3.85/$38.50), or contact Jean-Pierre Simard (613-996-9304), Retail Trade Section, Merchandising and Services Division, Statistics Canada, Ottawa K1A 0T6.

## Language in Canada

## Addendum

*Language in Canada* (Catalogue No. 99-935), an upcoming publication in Statistics Canada's Census Content Series, was announced in the May, 1984 issue of the Canadian Statistical Review. The publication is not currently available as efforts to produce a high quality publication are still in progress. *Language in Canada* will be available within a few months.

## New Format for Import Statistics

Annual import statistics in seven-digit detail are now available from Statistics Canada on microfiche, computer printout, and on magnetic tape, replacing the publication, *Imports: Merchandise Trade, Commodity Detail* (Catalogue No. 65-207). These data will be available on request, at cost, for the commodities and countries required by the user.

Import data are available for 16,000 commodity classes and by each source country. Readers interested in determining what is available can refer to the *Canadian International Trade Classification Reference Manual* (Catalogue No. 65-502 E and F), which contains the seven-digit commodity coded headings.

This new format is intended to provide current and potential users of annual import data with earlier availability while permitting users to select data.

For further information readers should contact the nearest Statistics Canada Regional Office or Trade Information Unit, External Trade Division, Statistics Canada, Ottawa, Ontario, K1A 0T6. (613-995-6305).

## Canada's Lone-Parent Families

There were more husband-wife and lone-parent families reported in Canada's 1981 Census than at any time during the preceding 50-year period. However since 1966, lone-parent families have increased at a faster rate than husband-wife families. *Canada's Lone-Parent Families,* a new publication from Statistics Canada, analyzes the recent growth in the number and percentage of lone-parent families.

In 1981, the largest concentrations of lone-parent families were to be found, of course, in the most populous provinces; that is, in Ontario, Quebec, British Columbia and Alberta, in that order. It is also noteworthy that since the late 1960's these provinces have reported and continue to experience the highest divorce rates as compared, for example, with Newfoundland, Prince Edward Island, New Brunswick and Saskatchewan.

An important aspect of the growing numbers of all lone-parent families is the considerable contribution being made by separated, divorced and never-married lone mothers who are more and more in the younger ages.

Obviously, lone-parent families and their members still constitute fairly small proportions of all of Canada's families and of their total family and child populations, as defined in the Canadian census. However, their continued, recently accelerated, and anticipated future increase in both numerical and percentage terms, is cause for concern.

This publication is part of the Census Content Series of non-technical publications featuring many charts and graphs. *Canada's Lone-Parent Families* will be of interest to social workers, planners and non-specialists interested in the numbers of lone-parent families. It will be particularly useful to teachers of courses in social and family studies as a supplementary text.

For your copy of *Canada's Lone-Parent Families,* (Catalogue No. 99-933 — $5.50 in Canada, $6.60 elsewhere), send a cheque or remittance payable to the Receiver General for Canada to: Publication Sales and Services, Statistics Canada, Ottawa, Ontario, K1A 0T6.

## Urban Growth in Canada

In the past decade, the distribution of Canada's population has been marked by a new trend: a decline in the proportion of the population classified as urban to 75.7% in 1981. This reversed the urbanization process of the previous 100 years, during which the urban population rose from 19.6% in 1871 to 76.1% in 1971.

In Canada, an examination of provincial urbanization rates shows they are falling in both the highly urbanized and the comparatively less urbanized provinces. The Atlantic and Central provinces are losing urban population to the Prairies, which in the late 1970's exerted a strong pull on labour from other provinces. British Columbia is also experiencing urban population decline, which may be due in part to the high cost of housing in some of its larger cities, such as Vancouver and Victoria.

Another aspect of urbanization is the proportions of the population which are found in large urban areas as compared with medium-sized or smaller ones and how these proportions have changed between 1976 and 1981. Generally speaking, medium-sized areas have grown faster than very large and small ones.

*Urban Growth in Canada* also discusses population changes in the core of urban areas versus their fringes: generally speaking, the population of the fringes is growing faster than that of the urban cores.

This publication is part of the Census Content Series of non-technical publications. Written in straightforward language for non-specialists, the text is enhanced with attractive charts.

*"Urban Growth in Canada"* is a report which will help Canadians better understand the shifting patterns of population growth in urban and rural areas. In particular, teachers of urban geography and urban studies will find this a useful supplementary text.

You can purchase your copy of *Urban Growth in Canada,* (catalogue No. 99-942 $5.50 in Canada, $6.60 elsewhere), by sending a cheque or money order payable to the Receiver General for Canada, to: Publication Sales and Services, Statistics Canada, Ottawa, Ontario, K1A 0T6.

## Changes in Incomes in Canada: 1970-1980

Income is the single most important criterion to analyse the economic well-being of families. *"Changes in Incomes in Canada: 1970-1980"* outlines the changes which took place in family incomes over the last decade.

Between 1970 and 1980, the average income of a census family nearly tripled from $9,600 to $26,700 in current dollars. However, a dollar in 1970 was worth over twice as much in terms of goods and services as in 1980. Thus, the real increase in average family income or purchasing power was 28% over the decade. In addition, average family size decreased so that a higher family income was shared on average by a smaller family in 1980.

One reason for the growth of family income was the consistently increasing proportion of families with more than one earner. This was the result of a significant increase in the number of working wives.

Although, on the whole, a large proportion of families moved from lower to higher income groups, the rate of increase experienced by different types of family differed. While husband-wife families gained over 30% between 1970 and 1980, the average income of female lone-parent families increased by less than 18%. As a result, 47% of female lone-parent families (compared to 54% in 1970) still had an income of less than $10,000.

In addition to discussing incomes by family structure, *"Changes in Incomes in Canada: 1970-1980"* examines the incomes of elderly couples, non-family persons by their living arrangements, income shares of different types of families and regional income differences.

As part of the Census Content Series, this publication is written in non-technical language supplemented by tables and coloured charts. It will be of interest to all levels of government, businesses and social service agencies. Educators in the fileds of socio-economic, commercial and Canadian studies will find it a useful tool.

You can purchase your copy of *"Changes in Incomes in Canada 1970-1980"*, (Catalogue No. 99-941 $5.50 in Canada, $6.60 elsewhere) by sending a cheque or money order payable to the Receiver General for Canada, to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

# Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1—Income and expenditure accounts

### Table 1.1: National income and gross national product (millions of dollars)

| Year and quarter | Wages, salaries, and supplementary labour income | Military pay and allowances | Corporation profits before taxes[1] | Deduct dividends paid to non-residents[2] | Interest & misc. investment income[3] | Accr'd net income of farm operators from farm prod.[4] | Net income of non-farm un-incorp. business incl. rent[5] | Inventory valuation adjust.[6] | Net national income at factor cost | Indirect taxes less subsidies | Capital consump. allowances & misc. val. adj. | Residual error of estimate | GNP at market prices | GNP at market prices excl. accrued net income of farm operators |

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

**For source see Table 1.9.**

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.
[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

## Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

| Annual average and month | Total shipments | Non-durable | Durable | Foods and beverages | Tobacco products | Rubber | Leather | Textile | Knitting mills | Clothing | Wood |

---

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.

[2] Includes crude oil, condensate and pentanes plus.

[3] Gross new production by field less field flared and waste.

---

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery

---

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

---

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

### Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

**CANSIM Division**

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montreal | (283-5725) | Regina | (359-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory,* Catalogue 12-569 — $16.70 Canada, $20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — $7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Corporate Assignments Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics
P.N. Triandafillou — Director, Industry Product Division
K. Lal — Acting Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 11 — External Trade

Effective with the July 1984 issue of this publication, the trade statistics presented in tables 1.1 to 1.6 are adjusted to conform with the National Accounts concepts and definitions, incorporating Balance of Payments Adjustments.

Monthly or quarterly data may not add to totals due to rounding.

Merchandise trade statistics appearing in tables 2.1 to 2.4 continue to be compiled and tabulated on a Customs Basis as previously.

For further information, please refer to Summary of External Trade (65-001), Statistics Canada.

Accordingly, the figures from Section 11 represented in Section 1 are also on a Balance of Payments Basis.

# Gross National Product

## First Quarter 1984
## Advance Information

Following normal practice, data from 1980 to 1983 inclusive have been revised to incorporate the most current source data and revised seasonal patterns. The revisions are generally within historically expected ranges.

Gross National Product rose 2.1% in the first quarter of 1984 to a level of $411.6 billion, seasonally adjusted at annual rates. After allowing for a 1.3% increase in overall prices, real GNP increased 0.8%, down slightly from the 1.2% increase of the fourth quarter of 1983. Real GNP is now about 1.0% above the level recorded at the peak of activity in the second quarter of 1981.

The major source of growth in the quarter was merchandise exports, up 8.9% in volume terms. This growth reflected to a large degree the continuing expansion of the U.S. economy and marks the second consecutive quarter that a strong U.S. economy has had a major influence on Canadian growth through export demand. The impact of the auto industry on the economy was pervasive as motor vehicle production and sales played dominant roles in exports, imports, consumer spending and inventory accumulation and were of major importance in profit growth of non-financial corporations. Final domestic demand advanced 0.6% with increases in all of the major components.

The growth in real merchandise exports, down slightly from the previous quarter, was concentrated in motor vehicles and parts which accounted for approximately two-thirds of the increase. Exports of crude materials such as petroleum and ores also advanced in the quarter. The growth in merchandise imports originated mainly in automotive products and machinery and equipment. The relatively greater growth of merchandise exports increased the nominal merchandise trade balance $0.6 billion to $17.7 billion at annual rates. Since the non-merchandise deficit increased by a slightly greater amount, the deficit on goods and services rose to $0.8 billion from $0.6 billion, seasonally adjusted at annual rates.

Real expenditures on business investment in plant and equipment increased 1.3% in the quarter. The machinery and equipment component advanced 1.9%, a continuation of the upturn which had commenced in mid-1983. Sources of supply for these capital goods included domestic production, imports and inventory drawdowns. The increase in non residential construction was more moderate, and included growth in both structures and engineering projects. These developments are consistent with the Private and Public Investment Intentions Survey which indicated that the large decline in business fixed investment in 1983 would not continue in 1984.

Real residential construction was virtually unchanged following the sharp decline of the fourth quarter of 1983. The volume of spending on new dwelling construction fell further, as housing starts have remained fairly weak following the large reduction in mid-1983. This lower spending on construction was offset by the growth in real estate commissions generated in an active market for resale homes during the quarter. Expenditure on alterations and improvements also increased modestly.

Business inventory accumulation moderated to about two-thirds the rate of the fourth quarter of 1983. In contrast to the widespread nature of the fourth quarter accumulation, automotive products held by retailers predominated in the first quarter. There was also some rebuilding of petroleum inventories, while stocks of wood and paper were reduced due to the interruption of production caused by labour disputes in British Columbia. Drawdowns of durable goods related to machinery and equipment investment also occurred, particularly at the wholesale level. The stock rebuilding of the past three quarters has only kept pace with the growth in demand over that period and stock-to-sales ratios have not moved significantly away from their trough levels. The most recent Statistics Canada business conditions survey underlined the continuing cautious attitude of the manufacturing sector to inventory build-up when it reported that more than 90% of firms surveyed thought finished goods stocks were either too high or about right.

The volume of personal expenditure rose 0.5% in the first quarter, down from the 0.9% increase in the previous quarter. Strong growth in demand for durable goods was almost entirely autos and auto related, as it was in the fourth quarter of 1983. Most other categories of durable expenditure fell in the first quarter. Spending on semi-durables (especially clothing) and non-durables declined while services spending recorded a moderate increase.

Labour income growth slowed to a 0.8% increase in the first quarter, down from 1.0% in the fourth, reflecting a slower pace of employment growth. A rise in personal expenditure in excess of income growth reduced the personal saving rate to 11.7% from the previous quarter's 12.6%.

Corporate profits rose 8.0% compared to 2.6% in the fourth quarter. Profit growth of financial corporations was strong while a moderate rate of increase prevailed for non- financial corporations for the second consecutive quarter. Within these corporations, the main impetus to profit growth was the automobile industry. While profits of industrial corporations continued to grow, pre-tax profit margins remained virtually unchanged.

## Revisions

The most significant revisions to previously published annual estimates occurred in labour income, corporation profits, income of non-farm unincorporated business including rent, gross fixed capital formation, inventories, and provincial government revenues and expenditures.

For labour income, revisions were the result of the incorporation of the Department of National Revenue tabulation of wages and salaries from "T-4" forms submitted by employers for 1982 and more recent information on supplementary labour income. Changes in corporate profits and depreciation resulted from the 1981 taxation data benchmarks and revised 1982 and 1983 projections. Higher estimates of capital expenditure reflected incorporation of the results of the survey of Public and Private Investment. Other changes were due to revised source data.

The net effect of these revisions has been to change overall annual growth rates of GNE as follows:

| | 1980 | 1981 | 1982 | 1983 |
|---|---|---|---|---|
| Published | 1.0 | 3.4 | -4.4 | 3.0 |
| Revised | 1.1 | 3.3 | -4.4 | 3.3 |

In addition to the annual revisions, monthly export and import data are now seasonally adjusted by commodity rather than at the total level. This change in method has resulted in revisions to the relevant quarterly expenditure and price series.[1]

---

[1] A more detailed description of this change in methodology can be found in the Statistics Canada Daily of June 7, 1984.

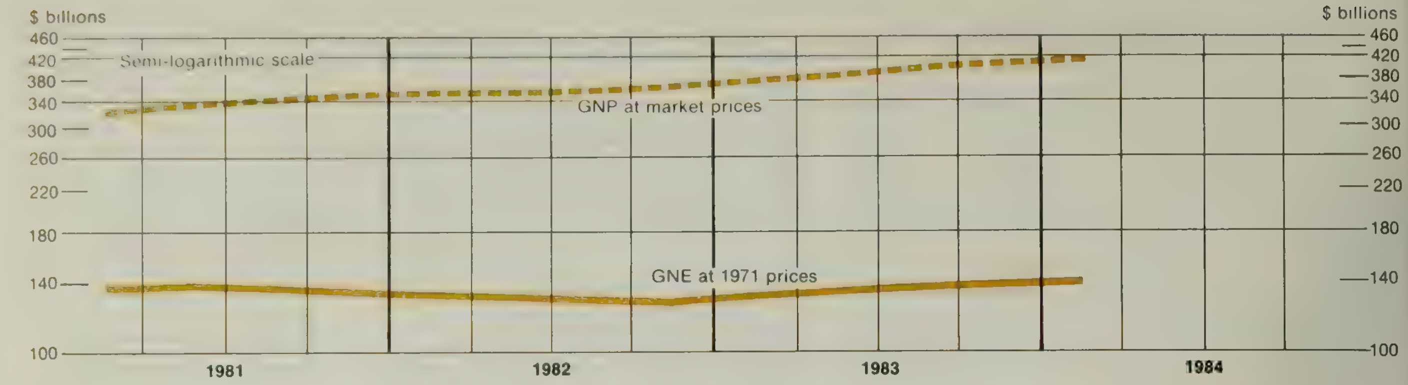
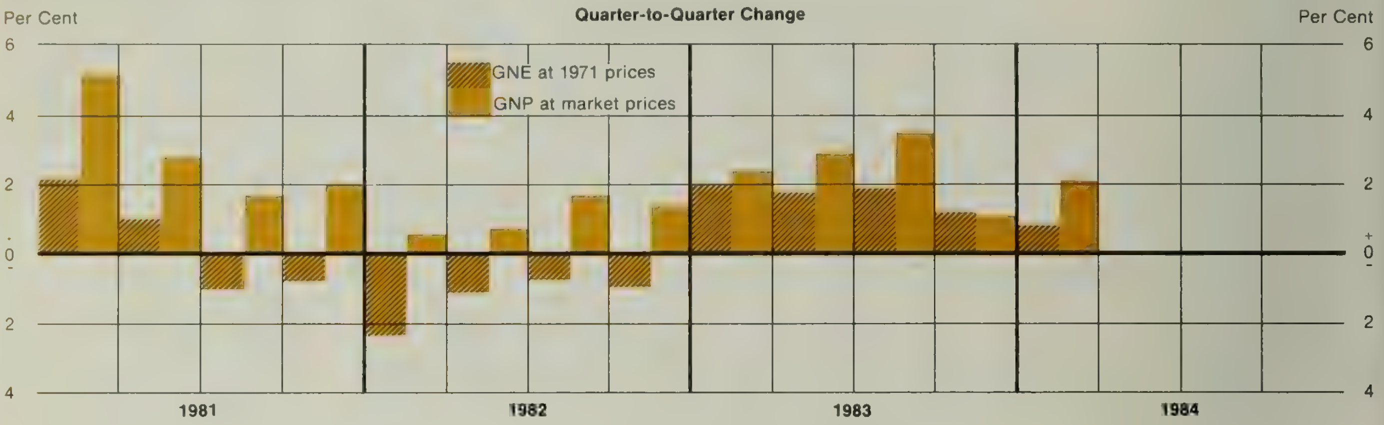
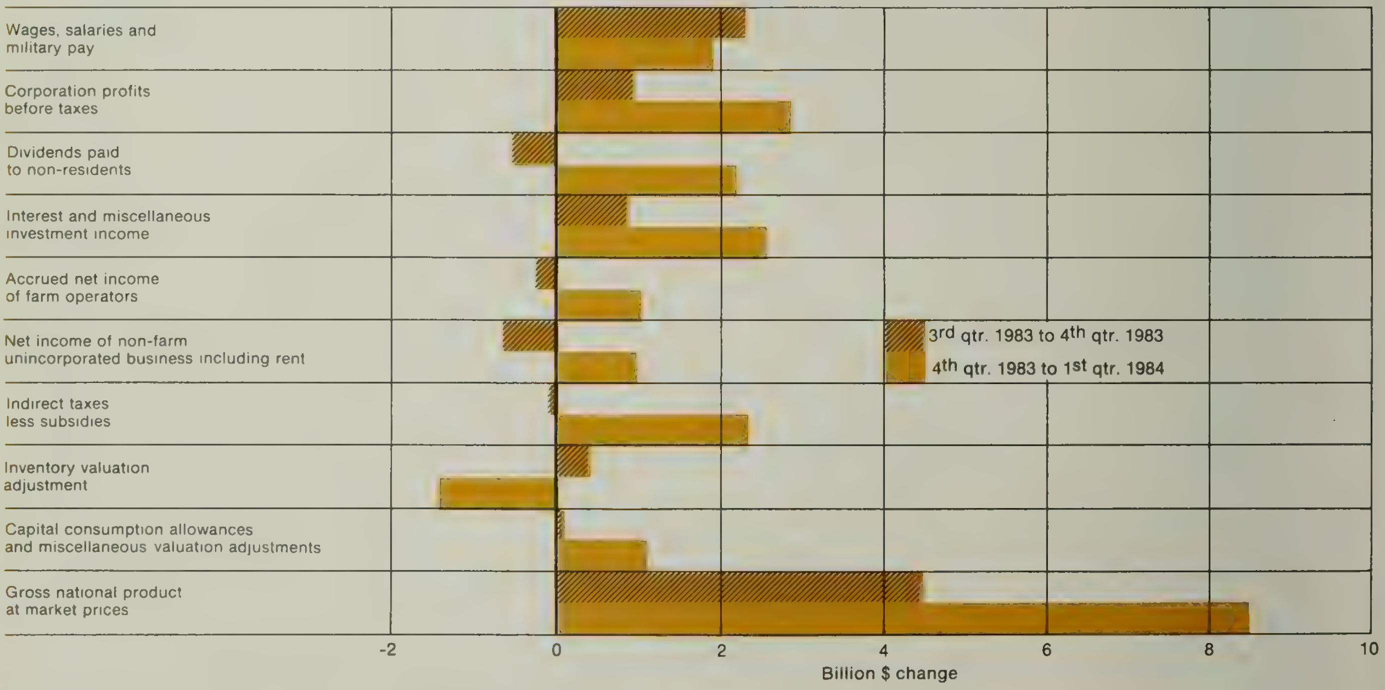
In the first quarter of 1984, Gross National Product increased 2.1% to a level of $411.6 billion seasonally adjusted at annual rates. In real terms GNP increased 0.8%.



In the first quarter of 1984, Gross National Product increased 2.1% to a level of $411.6 billion seasonally adjusted at annual rates. In real terms GNP increased 0.8%.

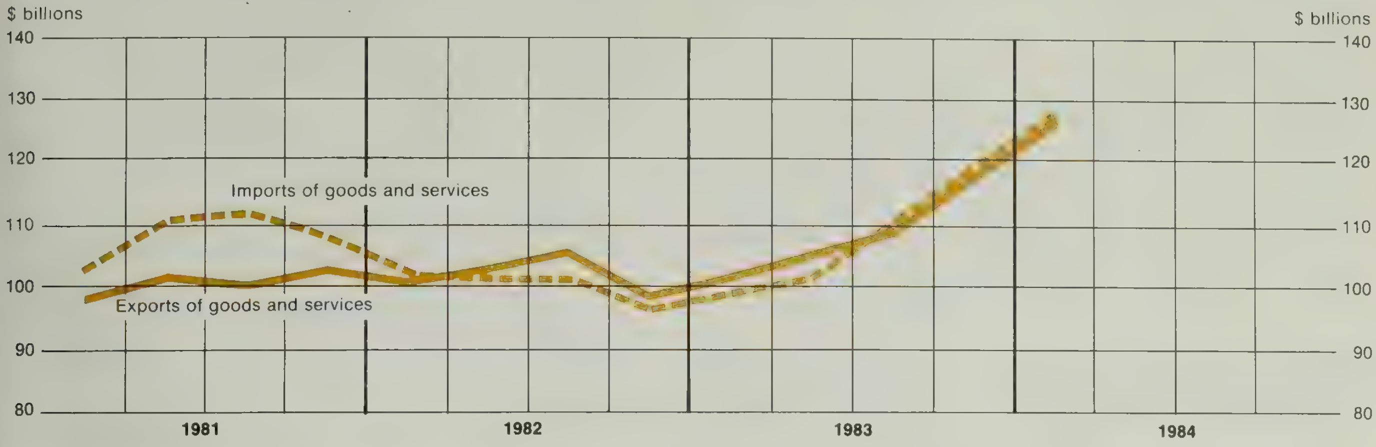


Wages, salaries and supplementary labour income and military pay and allowances increased 0.8%, compared to 1.0% in the fourth quarter of 1983. Corporation profits and interest and miscellaneous investment income both rose by about 8%.

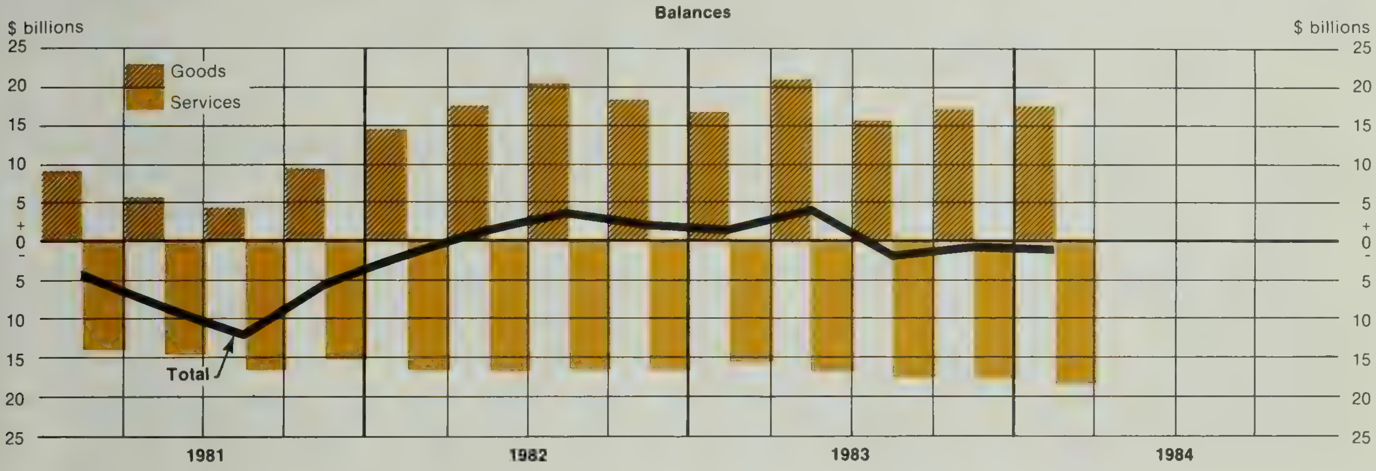


Note: All quarterly data adjusted for seasonal variation and at annual rates

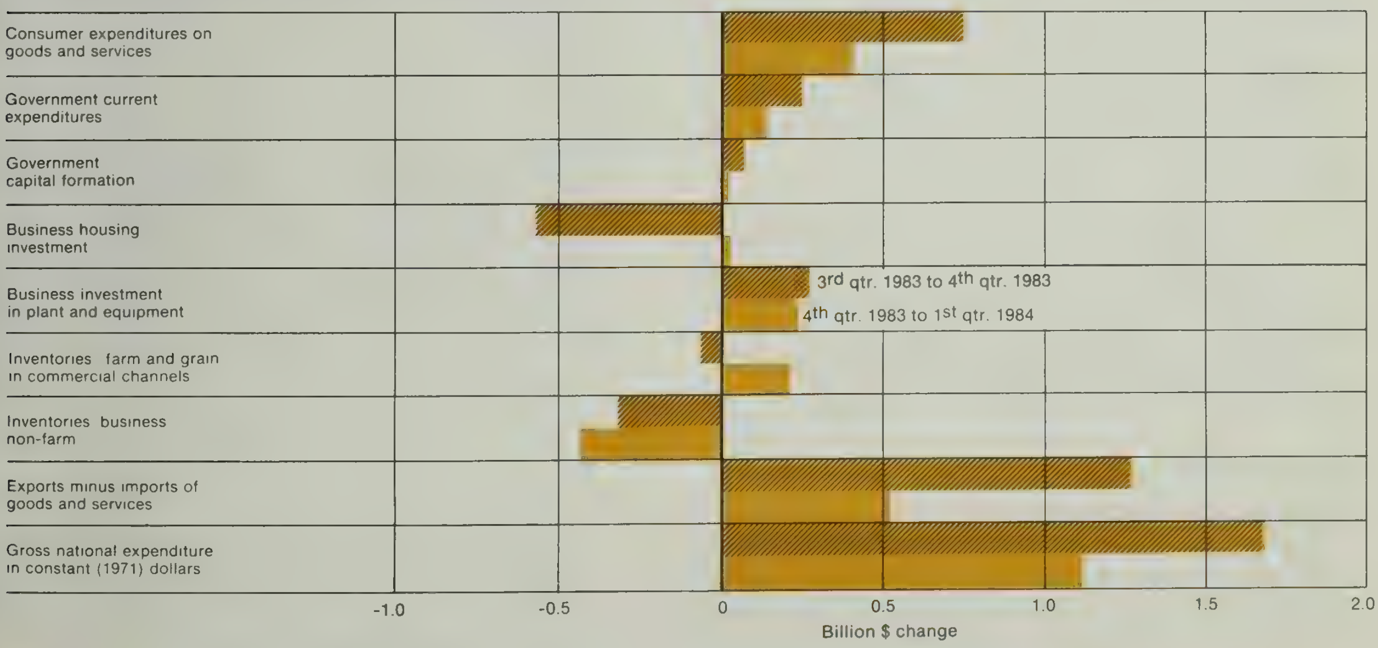
Exports and imports of goods and services rose 7.5% and 7.6% respectively, with the result that the deficit on goods and services rose to $0.8 billion from $0.6 billion, seasonally adjusted at annual rates.



Exports and imports of goods and services rose 7.5% and 7.6% respectively, with the result that the deficit on goods and services rose to $0.8 billion from $0.6 billion, seasonally adjusted at annual rates.



The volume of personal expenditure rose 0.5% in the first quarter, down from the 0.9% increase in the previous quarter. Real residential construction was virtually unchanged following the sharp decline of the fourth quarter while investment in plant and equipment increased 1.3% compared to 1.5% in the fourth quarter.



Note: All quarterly data adjusted for seasonal variation and at annual rates

# OBSERVATIONS

## Charting Canadian Incomes 1951-1981

Has the distribution of income in Canada changed during the past 30 years? Who is benefiting most from social programs? Whose earnings have been rising faster — men's or women's?

*Charting Canadian Incomes 1951-1981,* a new chartbook from Statistics Canada, provides you with the answers to these and other questions relating to incomes of Canadians. For example, from 1951 to 1976, the average income of families and unattached individuals grew steadily but then levelled off because inflation began to eat up most gains. Social benefit programs have become important sources of income for families in the lowest income group. Earnings of women have continued to increase since 1976; however, men's have declined.

*Charting Canadian Incomes 1951-1981* explores, with the aid of 20 colourful charts, the effect on income of factors such as family size, number of earners in the family, social benefit programs and income taxes. This chartbook can be used as a handy reference tool by the high school and college audience and other non-specialists interested in the dynamics of incomes of Canadians.

You can purchase your copy of *Charting Canadian Incomes 1951-1981* (Catalogue No. 13-581E $6.65 in Canada; $7.95 elsewhere) by sending a cheque or money order payable to the Receiver General for Canada to Publications Sales and Services, Statistics Canada, Ottawa, Ontario K1A 0T6.

## Merchandise Trade
## (Balance of Payments Basis)

Effective with the July 1984 issue of the Canadian Statistical Review the statistics presented in Tables 1.1 to 1.6 of Section 11 are adjusted to conform with the National Accounts concepts and definitions. Balance of Payments adjustments to Customs Basis data are incorporated at an aggregated level in order to make them compatible with the system of National Accounts.

## Balance of Payments Adjustments[1]

### Coverage or Valuation

*Automotive Products:* Deductions are made for both exports of cars and trucks and imports of automotive parts for retroactive value adjustments and for special tooling and other charges.

*Gold:* Adjustments are made to customs basis trade data to remove gold which is owned by non-residents.

Other adjustments include United States/Canada Trade reconciliation, advertising, official valuation, freight and other adjustments.

### Timing

*Grains:* The Canadian Grain Commission's records of grain clearances from exporting warehouses during the full calendar month are used to adjust Trade of Canada series for grain exports. The volume of clearances obtained from this source are combined with unit values from customs-based series to derive hybrid estimates which are substituted for original customs series.

---

[1] For detailed description of sources and methods please refer to Cat. 67-506E (occasional) "The Canadian Balance of International Payments and International Investment Position".

*Energy:* Trade in electricity and of exports of crude petroleum and natural gas, and imports of "swap oil" from the United States, are adjusted to account for the one month reporting lag. Starting with January 1984 data, the adjustments apply only to the current month for exports of electricity, crude petroleum and natural gas, as customs based data are shifted back one month, thus reflecting the true statistical month.

*Ships, Civil Aircraft and Military Equipment:* The adjustment substitutes progress payments in connection with the construction of ships, civil aircraft and some military equipment, in place of the actual deliveries of the equipment recorded in the Trade of Canada series.

### Geographic Classification

On a balance of payments basis, trade with the United States includes trade with Puerto Rico and the Virgin Islands.

## Seasonal Adjustment

Total exports (domestic exports and re-exports) and imports on a seasonally adjusted basis are now calculated indirectly as the sum of approximately sixty commodity aggregates. Where stable seasonality cannot be reliably identified, the series is not seasonally adjusted. Therefore, seasonally adjusted total exports and imports represent a combination of raw and seasonally adjusted data. Previously the total was seasonally adjusted from raw data at the total level.

## Price Indexes

### Timing

From 1971 to 1983, the export price indexes for electricity, natural gas and crude petroleum on a customs basis which were lagged one month have been adjusted to represent the true calendar month. Similarly, the import price index for crude petroleum from the United States on a customs basis has been adjusted and recombined with the "Other country" import price index in order to arrive at an "All country" import price index. From January 1984, onward, the one month lag is now corrected on a customs basis.

### Aggregate Levels

Indexes at an aggregate level (section and total levels) are calculated by using value weights on a balance of payments basis with price indexes derived from customs data.

## Data Availability

Data on a balance of payments basis are available on CANSIM.

| | Matrix |
|---|---|
| Laspeyres fixed weighted import volume indexes 1971=100, raw and seasonally adjusted, will be available starting with the release of March 1984 data for the total and April 1984 data for detailed commodities. | 3643 |
| Imports, all country current weighted (Paasche) price indexes, 1971=100, raw and seasonally adjusted. | 3649 |
| Imports, all country fixed weight (Laspeyres) price indexes, 1971=100, raw and seasonally adjusted. | 3650 |
| Imports, all country values by section and commodity groupings, raw and seasonally adjusted; import values for 6 principal trading areas, raw and seasonally adjusted. | 3651 |
| Laspeyres fixed weighted export volume indexes 1971=100, raw and seasonally adjusted, will be available starting with the release of March 1984 data for the total and April 1984 data for detailed commodities. | 3644 |
| Total Exports, all country current weighted (Paasche) price indexes, 1971=100, raw and seasonally adjusted. | 3683 |
| Total Exports, all country fixed weight (Laspeyres) price index 1971=100, raw and seasonally adjusted. | 3684 |
| Total Exports, all country values by section and commodity groupings, raw and seasonally adjusted; total export values for 6 principal trading areas, raw and seasonally adjusted. | 3685 |

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

## Section 3 · System of National Accounts

**1. Income and Expenditure Accounts**

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

**2. Domestic Product by Industry**

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

**3. Balance of International Payments**

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1—Income and expenditure accounts

### Table 1.1: National income and gross national product (millions of dollars)

| Year and quarter | Wages, salaries, and supplementary labour income | Military pay and allowances | Corporation profits before taxes¹ | Deduct dividends paid to non-residents² | Interest & misc. investment income³ | Accr'd net income of farm operators from farm prod.⁴ | Net income of non-farm un-incorp. business incl. rent⁵ | Inventory valuation adjust.⁶ | Net national income at factor cost | Indirect taxes less subsidies | Capital consump. allowances & misc. val. adj. | Residual error of estimate | GNP at market prices | GNP at market prices excl. accrued net income of farm operators |

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

| 1984 1 | 241,752 | 88,408 | 79,012 | 11,408 | 67,604 | 15,452 | 24,436 | 27,716 | 2,896 | -20 | 2,700 | 216 | 126,248 | -127,076 | 344 | 411,584 |

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

**For source see Table 1.9.**

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.
[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

---

[1] Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)/concluded

| Annual average and month | Furniture and fixtures | Paper & allied industries | Printing publishing & allied industries | Primary metal | Metal fabricating (ex. machy. & transp. equip.) | Machinery | Transportation equipment | Electrical products | Non-metallic mineral products | Petroleum and coal products | Chemical & chemical products | Misc. mfgrg. |

---

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

## Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| | Inventories owned | | | | | | | Inventories held: raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Consumer goods | | | | | | | Consumer goods | | | | | | |
| Annual average and month | Non-durable | Durable | Machinery and equip-ment | Con-struction materials and com-ponents | Other inter-mediate goods & supplies | Export-based industries | Supple-mentary classifi-cation: automotive products | Non-durable | Durable | Machinery and equip-ment | Con-struction materials and com-ponents | Other inter-mediate goods and supplies | Export based indus-tries | Supple-mentary classifi-cation: automotive products |

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

---

[1] Less imports. [2] Total net generation less net exports.

Note: Monthly data includes all producers of electric energy who generate 20 GW.h or more per year. Annual data represent full coverage of generating facilities that may include revisions not available on a monthly basis.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

---

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

# Section 11 · External Trade

1. Merchandise Trade on a Balance of Payments Basis

108 1.1 Total Exports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
1.2 Imports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
109 1.3 Price and Volume Indexes of Total Exports by Section, Seasonally Adjusted, Balance of Payments Basis
1.4 Price and Volume Indexes of Imports by Section, Seasonally Adjusted, Balance of Payments Basis
110 1.5 Total Exports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
112 1.6 Imports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis

2. Merchandise Trade on a Customs Basis

114 2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis
115 2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis
116 2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis
118 2.4 Imports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

## 1—Merchandise trade on a balance of payments basis

---

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

---

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

---

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Statistics Canada Statistique Canada

### Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

**CANSIM Division**

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montreal | (283-5725) | Regina | (359-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

# Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory,* Catalogue 12-569 — $16.70 Canada, $20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — $7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Corporate Assignments Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics
P.N. Triandafillou — Director, Industry Product Division
K. Lal — Acting Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 6 — Table 14: Production of Motor Vehicles

This table has been re-structured. Total Chrysler cars and components have been terminated at source and removed with this issue. Model breakdowns for Ford and General Motors have also been removed with this issue.

Section 8 — Table 10: Domestic Shipments of Building Materials by Canadian Manufacturers

The series Lath (D340011), Portland Cement (D340012), and Mechanical Refrigerators (D340029) have been removed with this issue.

Monthly or quarterly data may not add to totals due to rounding.

Section 9 — Table 3: Farm Input Price Index and Selected Components

The official time base for the Farm Input Price Index has been converted from 1971=100 to 1981=100. Please note that the CANSIM databank numbers have also been modified.

Section 13 — Table 10: Budgetary Expenditures by Principal Classes

The series Post Office (D5136) has been terminated at source and removed with this issue. Due to changes in accounting classes the amounts for the Post Office are now included in Other Departments (D5140). This has been backdated to April 1978 by the Department of Finance.

# Financial Activity in Canada
## First Quarter 1984

With the Canadian economy continuing to grow, activity on financial markets also increased. Net new funds raised on conventional credit markets by the domestic non-financial sectors of the economy amounted to $15 billion, representing 15% of Gross National Expenditure. This compares with 9% in the equivalent period of 1983. A notable feature of the increased demand for funds was that for the first time in two years, the government sector was not the principal actor on conventional credit markets: non-financial private corporations accounted for 34% compared with 30% for general government. In the first quarter of 1983, the comparable figures were 5% and 55%, respectively.

The recovery in the real economy moved production in the first quarter above the peak achieved in the spring of 1981. Inventory accumulation, particularly of automobiles, by non-financial private corporations surged, reaching an historic high of $2.2 billion. Because internal sources were able to finance only 80% of this capital formation, these corporations needed to borrow. More-over, while the federal government's total borrowing requirement moved above $8 billion for the first time, it was able to reduce its recourse to capital markets by drawing down on substantial deposits at banks (built up in the previous quarter from the Canada Savings Bond Campaign) as well obtaining Canadian dollars transferred from the Exchange Fund Account. In addition, the provincial governments' seasonal first quarter surplus was significantly larger, permitting them to limit their financing needs.

On the other hand, with the slowing of the growth of consumer expenditure, there was sharply lower demand for consumer credit, even though automobile purchases provided much of the support to personal expenditure. Mortgage demand was also weak, reflecting the reduced amount of housing starts over the past several months.

Non-financial private corporations raised $5.1 billion in net new funds on conventional credit markets, over one and a half times the net infusion of funds for the whole of 1983. Although there appears to be still some concern at the degree of leverage in some industries, much progress has been made in the past two years to reduce the debt: equity ratio. With stock prices falling in the first quarter, there was less opportunity to issue equities: even so, $1.2 billion were sold. While a large proportion of these funds appeared to have been applied to reducing bank loans outstanding, other corporations increased their bank loans, seemingly, in part, to finance inventory accumulation. As a result, this sector raised $1.4 billion in net bank loans, the largest source of funds from this source in two years. Net new bond issues amounted to $545 million, with the dates to maturity lengthening somewhat from the previous quarter. This sector also showed limited recourse to the short-term paper market, raising $487 million, and loans from sources other than banks (largely non-residents) provided a further $1.3 billion. With much of the financing being of a short-term nature, it would appear to have been linked to the substantial build-up in inventories.

The federal government raised $3.6 billion on conventional credit markets, compared with $11.6 billion in the fourth quarter (when borrowings were swollen by the Canada Savings Bond campaign) and $3.2 billion in the first quarter of 1983. Excluding Canada Savings Bonds sales and redemptions, the borrowings were $4.7 billion in the first quarter 1984, $3.2 billion in the fourth quarter and $4.3 billion in the first quarter of 1983. Gross new bond issues amounted to $2.9 billion, virtually unchanged from the previous quarter but up from $2.5 billion in the first quarter of 1983. The average term to maturity of Government of Canada debt remained at 5 years 5 months, heavily weighted by the amount of Treasury bills outstanding. In the first quarter, nevertheless, there were longer terms to maturity of the gross new bond issues. Nearly one third had maturity dates of more than twenty years, up from one quarter in the fourth quarter and none at all a year earlier.

The borrowings in the period under review were augmented $500 million as a result of U.S. dollars borrowed from Canadian chartered banks to bolster the international reserves. These latter funds were advanced to the Exchange Fund Account and represent a use as well as a source of funds on the Government of Canada's books. To the extent that Canadian dollars are acquired on international exchange markets, these funds are transferred from the FFA to the consolidated revenue fund of the Government of Canada and constitute a source of Canadian dollars to the federal government. The federal government's deficit amounted to 8.2% of GNE in the first quarter, a small drop from the equivalent period in 1983.

Households' demand for funds was subdued. Consumer credit rose a moderate $600 million, continuing the weakening trend of the past few quarters. It would appear that consumers are financing more expenditures from income (the savings rate dropped one percentage point from the previous quarter) and also drawing on some financial assets. Part of the substantial encashment of $1.3 billion in Canada Savings Bonds may have been applied to consumption. With housing starts having averaged only 139,000 (seasonally adjusted at annual rates) over the nine months ending March, 1984, the weakness in mortgage financing, $2.4 billion, was expected.

The increase in demand for funds by non-financial private corporations meant that the chartered banks saw their loans outstanding increase for the first quarter since the fourth quarter of 1981. To help finance the increase in demand for this instrument, the banks sold $900 million in Government of Canada Treasury bills. As a result, their excess secondary reserve ratio fell to 5.65 at the end of March, still very high by historical standards but down significantly from the peak of 7.20 reached in August 1983. The banks also sourced much of the renewed demand for bank loans from their subsidiaries abroad. Persons applied much of their discretionary savings to trust and mortgage loan companies: largely to term deposits of less than a year at mortgage loan companies and to term Registered Retired Savings Plans and Trust companies.

The increased demand for funds occurred notwithstanding the rise in interest rates in the first quarter. Short-term rates, after remaining essentially unchanged in January and February, rose in March, largely in response to upward pressure on rates in the United States. The yield on 3-month Treasury bills rose about 70 basis points to 10.53%, while the prime rate increased by 50 basis points, to 11.50%, narrowing the gap with the Bank rate to less than three quarters of a percentage point. Thirty-day paper and bankers' acceptances rose by less, making these instruments attractive alternatives to bank borrowing. The increased use of "paper" by non-financial private corporations appeared to reflect this development. Yields on longer-term instruments rose by about a percentage point, with the rise being more evenly spread across the quarter. By the end of March, yeilds on long-term Government of Canada bonds were over 13.20%; provincial and industrial bonds were 50 to 60 basis points higher, representing very high real rates of return or market anticipations of renewed inflationary pressures, or both.

The strong recovery in the United States, and the equally strong demand for funds, coupled with the Federal Reserve Board's concern about another inflationary outburst, combined to produce higher interest rates in the first quarter. Yields on 30-day commercial paper at the end of March were higher than on the equivalent instrument in Canada. As a result, strong downward pressure was exerted on the Canadian dollar, which fell to 78.36 cents U.S. at the end of March, its lowest monthly closing since June 1982. Despite these pressures, the Bank of Canada acquired $375 million in Treasury bills in March, while also increasing its holdings of Government of Canada bonds, in an apparent effort to avoid too sharp an increase in interest rates in Canada.

For further information, please contact John Joisce, Gerry Gravel or Christian Lajule: (613) 990-9043, Financial Flows Division, Statistics Canada, Ottawa, Ontario, K1A 0T6.

he Financial Market Summary Table compresses the abundance of detail presented in the Financial Flows sector tables by aggregating sectors d by deleting non-market instruments such as trade credit and claims on associated enterprises. The table also provides a useful approximation final borrowing via financial markets (i.e., the organized markets for security issues and negotiated loans) and avoids double counting of the termediary borrowing and re-lending of financial institutions. Line 5 (Total Borrowing by Domestic Non-Financial Sectors) provides the duplicated total which serves as a simple summary statistic of domestic credit market activity. The addition of the Rest of the World and Financial stitutions (lines 6 and 8) completes the system and consequently line 9 (Total Funds Raised=Total Funds Supplied) reflects the basic identity that e change in liabilities, summed across sectors, for an instrument or instruments equals the change in assets, summed across sectors, for the same strument or instruments. Further discussion of the table is contained in an article published in Financial Flow Accounts, Second Quarter 1976 and the Canadian Statistical Review, March 1977.

) Since Sector XII, Social Security Funds, has been consolidated with General Government, the holdings by the Funds of Provincial and Federal Government bond debt are netted out. the asset bond figure (category 2420) for Sector XII is subtracted from the sum of the liability bond figure for Sectors X (Federal Government) plus XI (Provincial and Local Governments and Hospitals).

) Separate figures for the share liabilities of the Rest of the World (Sector XIII) are not available but since Foreign Investments (category 3530) consists mostly of shares, it is classified to Stocks.

) The Stock figure included in Sector I and II is the true residual of category 3520, i.e., it is the sum of category 3520 (the stock liability) less the sum of category 2520 (the stock asset) for sectors III through XIII. This procedure is necessary to ensure the balance between total funds supplied and raised in line 9. In the main Financial Flows Matrix the sum across sectors of corporate claims plus stocks on the liability side equals the sum of the two on the asset side, however, stocks alone do not balance because stocks on the liability side include shares issued to associated enterprises (included in corporate claims on the asset side).

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] As of the first of each month. Quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates; final postcensal estimates from July 1, 1981 to April 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates for January 1984. For an explanation of population estimates methodology and data sources see catalogue (91-201) and (91-001). [2] These estimates have been modified due to a revision in the number of births for January to December 1983.

**Sources: Quarterly Estimates of Population for Canada and Provinces (91-001), Annual Estimates of Population for Canada and Provinces at June 1st (91-201), Statistics Canada.**

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

## Section 3 · System of National Accounts

**1. Income and Expenditure Accounts**

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

**2. Domestic Product by Industry**

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

**3. Balance of International Payments**

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1—Income and expenditure accounts

### Table 1.1: National income and gross national product (millions of dollars)

| Year and quarter | Wages, salaries, and supplementary labour income | Military pay and allowances | Corporation profits before taxes[1] | Deduct dividends paid to non-residents[2] | Interest & misc investment income[3] | Accr'd net income of farm operators from farm prod.[4] | Net income of non-farm un-incorp. business incl. rent[5] | Inventory valuation adjust.[6] | Net national income at factor cost | Indirect taxes less subsidies | Capital consump. allowances & misc. val. adj. | Residual error of estimate | GNP at market prices | GNP at market prices excl. accrued net income of farm operators |

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] This item differs from col. 6, Table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers. [2] Includes all interest on the public debt paid by government to persons. [3] Charitable contributions and bad debts.

**For source see Table 1.9.**

## 1—Income and expenditure accounts

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

**For source see Table 1.9.**

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.
[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

---

[1] Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

## Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)/concluded

| Annual average and month | Furniture and fixtures | Paper & allied industries | Printing publishing & allied industries | Primary metal | Metal fabricating (ex. machy. & transp. equip.) | Machinery | Trans-portation equipment | Electrical products | Non-metallic mineral products | Petroleum and coal products | Chemical & chemical products | Misc mfgrg |

---

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

## Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| | Inventories owned | | | | | | | Inventories held: raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual average and month | Consumer goods | | Machinery and equipment | Construction materials and components | Other intermediate goods & supplies | Export-based industries | Supplementary classification: automotive products | Consumer goods | | Machinery and equipment | Construction materials and components | Other intermediate goods and supplies | Export based industries | Supplementary classification: automotive products |

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

**Source: Housing Starts and Completions (64-002), Statistics Canada.**

---

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

## Section 11 · External Trade

1. Merchandise Trade on a Balance of Payments Basis

108 1.1 Total Exports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
1.2 Imports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
109 1.3 Price and Volume Indexes of Total Exports by Section, Seasonally Adjusted, Balance of Payments Basis
1.4 Price and Volume Indexes of Imports by Section, Seasonally Adjusted, Balance of Payments Basis
110 1.5 Total Exports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
112 1.6 Imports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis

2. Merchandise Trade on a Customs Basis

114 2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis
115 2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis
116 2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis
118 2.4 Imports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

## 1—Merchandise trade on a balance of payments basis

### Table 1.1: Total exports[1] by major trading area and section, seasonally adjusted, balance of payments basis[2] (millions of dollars)

| | Major trading areas[3] | | | | | | | Sections | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Month | Total | United States | United Kingdom | Other E.E.C. | Japan | Other O.E.C.D. | Other countries | Live animals | Food, feed, beverages & tobacco | Crude materials, inedible | Fabricated materials, inedible | End products, inedible | Special transactions trade | Unallocated B.O.P. adjust. |

---

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

---

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.
